

## TOMATOES

### How to grow your own tomatoes

- Dig the soil to one good spade's depth up to 3 months before planting.
- Mix in some well-aged manure or compost.
- About 6 weeks later, dig in some Yates Garden Lime.
- Plant tomato seedlings and water in well.
- Feed every week with Yates Thrive Soluble Plant Food
- Control pests and diseases with Tomato Spray or Tomato Gun.

### Growing Tomatoes in pots

If you don't have enough space in the garden to grow tomatoes, try them in containers instead. Yates Tiny Tim is compact enough to grow in a small container. Larger varieties need bigger pots - a Yates Tuscan pot in the 400mm size is best. Fill with Thrive Premium Potting Mix and fertilise regularly with Thrive Soluble Plant Food. Yates Ready-to-Use Tomato Gun, Lanosan or Tomato Spray will control a wide range of pests and diseases.
