A lawn legend

HOW YOU SHOULD BE LAWN-ING THIS SUMMER:

Keep your lawn watered regularly & check for water evaporation so you are only using what you need.

Monitor for insect pests & investigate damaged areas. To check for lawn pests, place a wet blanket over the area overnight & check in the morning for lawn pests that have come to the surface.

Monitor for leaf & crown diseases, add an extra dosage of **Root Regenerator™** to help with the stress of Summer.

Why am I applying these products through the Summer period?

Summer is always stressful for turf, with increased play and temperatures, so giving them some extra nutrition helps withstand these harsh conditions.

Green Dominator™ gives your lawn that extra impressive green colour when entertaining family or friends over the holiday period.

Keep water available to your lawn by adding some **Smart Wetter™** once a month, don't forget to hydrate yourself too!

High quality kelp products can help your lawns in times of stress, such as that summer heat! Adding some much needed **Root Regenerator™** to your watering regime will help with stress.
